DL Window Fabrication are in partnership with Kömmerling,
the leading award-winning extruder in Europe.

Kömmerling takes its environmental responsibility very seriously,
assuming its commitment to protecting our eco-system.

Kömmerling already complies with the requirements of 'Vinyl
2010' initiative, a ten-year voluntary programme on Sustainable
Development within the PVC industry. In 2001 Kömmerling
began producing the industry-leading unleaded PVC-u
Greenline, and has since pioneered further with the launch
of the innovative recycling initiative **Recycline**.

We manufacture and supply

DL Windows have been in operation since 1995 manufacturing and supplying windows, doors and conservatory roofs for all types of houses . Our manufacturing premises are in Clonalvy, Garristown, Co. Dublin, where we have invested in leading-edge technology, operated by a highly skilled, precision workforce. From simple, traditional windows to more architecturally demanding designs, our expertise and tailor-made approach will ensure that you get the very best.

Our team will meet you to discuss your needs and can offer expert advice. We can help you choose your windows and guide you through the extensive selection of accessories. When it comes to installation, our team has all the experience to get the job done neatly and efficiently with minimum disruption.

*“ Our aim: to become synonymous with quality!
We give a full, written warranty for your windows upon installation. Because we make them, we are fully accountable for them!”*

Danny Lee, Manager, DL Windows.

The low-maintenance, new PVCu Sash window. With its innovative aluminium bar, it is one of the most secure vertical sliding windows ever.

DL Windows are constantly striving for perfection. We use only the best. Our partnership with Kömmerling, Europe's leading extruder, gives us the edge. For instance, while the standard wall thickness for a window frame is 2.6mm, our profile has a thickness of 3mm. And this, gives our windows and doors superior strength.

Standard of excellence

When it comes to glazing, DL Windows lead the field. Conserving energy has never been more important than now and insulating with high-grade glazing, is one of the most cost-effective ways of doing it. Heat-loss is measured in u-values: the lower the value, the greater the insulation properties.

All glazing used by DL Windows has a u-value of 1.1. The standard is 1.8.

DL Windows' are proud to announce a BFRC 'A' RATING on our Energy Gold casement windows.

In line with the Kyoto Agreement, all buildings being sold or rented must have a Building Energy Rating Cert, whereby the insulation properties of the entire house are assessed. It is important that the windows in your home contribute to its energy efficiency. When you choose our 'A' rated Energy Gold casement windows you will receive an official BFRC 'A'- Rated Cert.

Window Energy Rating: A

The BFRC (British Fenestration Rating Council) is an independent body which is leading the development and application of window energy ratings. (Currently, there is no Irish equivalent.) The Window Energy Rating label is similar to the EU label used on fridges, washing machines and light bulbs. It calculates precisely the overall u-value of the entire window, taking into account solar gain and heat loss through air infiltration as well as climate data. You can log on to the BFRC website at www.bfrc.org to verify any companies claims to be A-rated certified.

All DL Windows' windows and doors are internally glazed, thus making it impossible for intruders to remove the glass.

Security is a primary concern when choosing new windows and doors. All our uPVC doors have a Gu Rino Hook lock, renowned in the industry to be the most secure, and awarded the title *Secure by Design* after extreme testing. It also has an optional safety catch, whereby the door may be opened slightly but cannot be forced open fully.

Rest assured...

All our casement windows – depending on your budget – can be upgraded to be fitted with Siegenia's Trident Security Espag locks – the most advanced locking system on the market and also awarded the title *Secure by Design*. In addition, to compliment this lock, our side-hung casement windows can be fitted with hinge guards as an optional extra. This gives further protection as it prevents the possibility of the hinges being levered out with a jimmy-bar.

Wheelchair access is something which Irish Building Regulations demand home-builders take into consideration, with at least one entrance being 'low-threshold'.

With DL Windows, everything is traceable back to reputable suppliers – everything down to the last nut and bolt. Our obsession with precision can be attested to, for instance, even down to how often we test all our welders – or, the fact that we calibrate our rules every day, rather than every week, which is standard. You can be sure that the product you get from DL Windows is superior in every facet.

Fire Regulations

When it comes to Fire and Safety, DL Windows will always ensure that the windows they provide for you meet with the strict regulations which exist in Ireland, with the minimum opening requirement of 0.33sq.m. Not all window providers do this because in many cases, it is the cheaper option to disregard the regulations.

In typical German standard of excellence and reliability, Kömmerling use only lead-free PVC. This means that your windows will look white and new for many years. Lower-grade materials will look well worn and aged after a relatively short period – or worse: turn a shade of pink.

Sunlight

Let the luxury of natural sunlight stream into your living areas... with dramatic gable-end windows, conservatories, sun-rooms, french doors (opening in or out), or bi-folding doors which can span up to 6 metres.

Rooflight

A rooflight is the perfect solution for a dark room. Virtually non-invasive, they will allow light into your home, brightening up even the darkest corners. All are tailor-made to suit, in aluminium. Ventilation is achieved through small opening vents which can be operated by a pole-and-hook system, or by remote control.

Your best choice

The first choice to make is the style of window /door. Secondly, how would you like your windows to open... side-hung? ...or perhaps tilt-and-turn? Next, your choice of colour, and finally, you may like to consider a design on the glass itself. Don't worry if you're baffled, our DL Windows team is well experienced in every twist and turn of the window business and are on hand to give you any assistance you may need.

Remember, our only limits
are the boundries of your imagination.
